

ELECTRICALLY ISOLATED SYSTEMS, METHODS AND DEVICES
FOR CONTROLLING VENTILATION REGISTERS

ABSTRACT

5 The invention teaches and shows systems, devices and methods for
controlling the automation of ventilation registers. In one embodiment, the
invention is a system for articulating a register for a heating or air-conditioning
system. The system generally includes a local power source, a means for
receiving a wireless signal, a means for switching a drive means on, a drive
10 means, and a movable member.
